## 1 はじめに

Index

これは XHATEX で和文組版を行う実験的なパッケージである。

## 1.1 使い方

本パッケージは XHATEX 上で動作する。

\usepackge で読み込む。

 $\verb|\usepackage[|\langle options \rangle|]{|} {|| xelatexja|}$ 

オプションは以下の通り。

- tate:文書全体を縦組みにする。
- jascale= $\langle fpexpr \rangle$ :和文フォントスケールを指定する。
- jfm= $\langle name \rangle$ : JFM を指定する。

本パッケージは  $X_{\Xi}T_{E}X$  の「文字間トークン自動挿入機能」を独占的に利用する。これらを利用する他のパッケージとは共存できない。

## 2 expl3 インターフェイス

### 2.1 組方向

 $\label{limit} $$ \begin{array}{ll} \xltj_if_tate_document:TF {$\langle true\ code \rangle$} & \\ \xltj_if_tate_document:TF & \\ \end{array}$$$ 

文書全体が縦組かどうかの条件式。

\xltj\_if\_tate\_text\_p: \* \xltj\_if\_tate\_text:TF {\langle true code \rangle} {\xltj\_if\_tate\_text: TF \* \xltj\_if\_tate\_text: TF \* \xlty \xltj\_if\_tate\_text: TF \* \xlty \xltj\_if\_tate\_text: TF \* \xlty \xltj\_if\_tate\_text: TF \* \xlty \xl

### 2.2 フォント

\xltj\_get\_jascale: \* \xltj\_get\_jascale:

和文フォントスケール値を取得する。

\l\_xltj\_zw\_dim
\zw

和文文字サイズ。

## 2.3 文字クラス

 $\verb|\xltj_class_new_kanji:n \xltj_class_new_kanji:n \aligned \{\langle class\rangle\}|$ 

和文文字クラスを新規に作成する。

欧文文字クラスを新規に作成する。

\newXeTeXintercharclass で作成した文字クラスを和文文字クラスとして定義する。

 $\xilingtrians_new_alpha:nn \xilingtrians_new_alpha:nn {$\langle class \rangle$} {\langle integer \rangle$}$ 

\newXeTeXintercharclass で作成した文字クラスを欧文文字クラスとして定義する。

kanji/default alpha/default boundary ignored

定義済み文字クラス。

kanji/default デフォルトの和文文字クラス。

alpha/default デフォルトの欧文文字クラス。

boundary 文字境界。

ignored 無視される文字。

\xltj\_char\_set\_class:nn

 $\x|tj_char_set_class:nn {\langle charcode \rangle} {\langle class \rangle}$ 

文字コードが〈charcode〉の文字の文字クラスを〈class〉に設定する。

 $\verb|\x|tj_char_set_class_range:nnn| & |\x|tj_char_set_class_range:nnn| & |\charcode_1\rangle & |\charcode_2\rangle & |\cha$ 

文字コードが $\langle charcode_1 \rangle$  から $\langle charcode_2 \rangle$  の文字の文字クラスを $\langle class \rangle$  に設定する。

\xltj\_class\_update:

\xltj\_class\_update:

文字クラス設定を更新する。

#### 2.4 組版パラメーター

\xltj\_set\_kanjiskip:n

 $\xline xltj_set_kanjiskip:n {\langle t1 \rangle}$ 

和文間空白(kanjiskip)を⟨tl⟩ に設定する。

 $\xline \xline \xline$ 

\xltj\_get\_kanjiskip:

kanjiskip を取得する。

\xltj\_set\_xkanjiskip:n

 $\xline xltj_set_xkanjiskip:n {\langle tl \rangle}$ 

和欧文間空白(xkanjiskip)を⟨tl⟩ に設定する。

\xltj\_get\_xkanjiskip: \*

\xltj\_get\_xkanjiskip:

xkanjiskip を取得する。

### 2.4.1 グルー・カーン

\xltj\_jfm\_set\_glue:nnn
\xltj\_jfm\_set\_kern:nnn

 $\xspace{0.2cm} $$ \xltj_jfm_set_glue:nnn {$\langle class_1 \rangle$} {\langle class_2 \rangle$} {\langle glue \rangle$} \\ \xltj_jfm_set_kern:nnn {$\langle class_1 \rangle$} {\langle class_2 \rangle$} {\langle kern \rangle$}$ 

和文文字クラス間に挿入するグルー・カーンを設定する。 $\langle glue \rangle$  および $\langle kern \rangle$  は挿入時に評価される。グルーとカーンを同時に設定することはできず、後から設定した方で上書きされる。

和文文字クラス間に挿入するグルー・カーンを削除する。

#### 2.4.2 文字幅調整

和文文字クラスの文字幅調整を設定する。例えば全角の括弧類・句読点類を半角で組むために -0.5\zw を設定する。

和文文字クラスの文字幅調整を削除する。

#### 2.4.3 禁則ペナルティ

和文文字クラス〈class〉の行頭・行末禁則ペナルティーを〈intexpr〉に設定する。

和文文字クラス〈class〉の行頭・行末禁則ペナルティー削除する。

## 2.4.4 和欧文間空白挿入設定

\xltj\_jfm\_set\_xspmode:nn

 $\x|tj_jfm_set_xspmode:nn {\langle class \rangle} {\langle xspmode \rangle}$ 

文字クラス $\langle class \rangle$  の前後に和欧文間空白の挿入を許可するかどうかを設定する。 $\langle xspmode \rangle$  に指定できる値は以下の

inhibit 文字の前後とも和欧文間空白の挿入を許可しない。

preonly 文字の前のみ和欧文間空白の挿入を許可し、後ろには許可しない。

postonly 文字の後ろのみ和欧文間空白の挿入を許可し、前には許可しない。

allow 文字の前後とも和欧文間空白の挿入を許可する。(デフォルト)

### 2.5 ボックス

```
\xltj_box_yjabaselineshift:n
                                                                                                                                                                                               \verb|\xltj_box_yjabaselineshift:n {|\langle box function \rangle|}|
                             \xltj_box_tjabaselineshift:n
                                                                                                                                                   ボックスを和文ベースライン補正して挿入する。
\xltj_yoko_in_tate_hbox:n
                                                                                                                                                  \verb|\xltj_yoko_in_tate_hbox:n {|} \langle contents \rangle \}|
                             \xltj_yoko_in_tate_hbox_to_wd:nn
                                                                                                                                                                                                                     \xlin_{yoko_in\_tate\_hbox\_to\_wd:nn} {\langle dimexpr \rangle} {\langle contents \rangle}
                                                                                                                                                                                                                         \xltj_yoko_in_tate_hbox_to_zero:n {\langle contents \rangle}
                             \xltj_yoko_in_tate_hbox_to_zero:n
                             \xltj_yoko_in_tate_hbox_set:Nn
                                                                                                                                                                                                                \xltj_yoko_in_tate_hbox_set:Nn \langle box \ \{\contents\}
                             \xltj_yoko_in_tate_hbox_set:cn
                             \xltj_yoko_in_tate_hbox_gset:Nn
                             \xltj_yoko_in_tate_hbox_gset:cn
                            \xltj_yoko_in_tate_hbox_set_to_wd:Nnn
                                                                                                                                                                                                                                                    \xline 
                             \xltj_yoko_in_tate_hbox_set_to_wd:cnn
                                                                                                                                                                                                                                                    \{\langle contents \rangle\}
